### Heading to Nepal with the new PRO TREK PRW-5100-1ER

**Norderstedt, February 2011** – After the successful launch of the PRO TREK PRW-5000 in spring 2010, Casio launches now another sporty PRO TREK watch with a well-arranged analogue digital display. The PRW-5100-1ER is engineered to a high quality standard and is suitable for everyday use, just like its predecessor. Its design, sturdiness and functions are tailored for the needs of people who rely on their watch not only during their everyday life, but also under adverse conditions.

With its impressive overall look, the PRW-5100-1ER's analogue face in black and anthracite is a perfect match for the black resin wristband and the brush-metal bezel. The white hands and white scale contrast markedly with the dark background – highly practical when light conditions change or dusk is falling.

The new PRO TREK is particularly captivating thanks to its technical perfection. Its TOUGH MOVEMENT technology combines four innovative functions: TOUGH SOLAR provides the energy to power the watch, while Multiband 6 technology ensures that six radio signals can be received worldwide (Europe, the US, Japan and China); an automatic hand adjustment function checks the hand position on an hourly basis, correcting it if necessary, while Casio's standard hybrid structure increases the watch module's shock resistance. Another practical feature is the multi-functional seconds hand, which also serves as a compass, barometer, thermometer or altimeter. After selecting the relevant mode, the wearer can see the corresponding reading displayed on a scale at the edge of the watch face and also on the clearly arranged digital display. The PRW-5100-1ER is able to withstand temperatures as low as -10° Celsius and is thus the perfect companion whether walking on the mountainside or down in the valley.

**The model features the following functions**

- TOUGH MOVEMENT TECHNOLOGY
  - MULTIBAND 6 RADIO SIGNAL RECEPTION (EUROPE, USA, JAPAN, CHINA)
  - TOUGH SOLAR
  - AUTOMATIC HAND ADJUSTMENT
  - HYBRID STRUCTURE TO PROTECT THE MODULE
