Visual aids for church services with the Dual Projection System from CASIO

Efficient projection system perfectly suited for use in churches

CASIO XJ-SK600

Norderstedt, November 2013 – Whether it's a wedding, christening or a nativity play – projecting photos, videos or illustrations gives church events a personal touch and are becoming ever more popular amongst church leaders and members of the congregation.

The Dual Projection System XJ-SK600 from CASIO is well suited for bright and large-surface projections in an environment with high ceilings. Consisting of a box with two mounted, pre-installed projectors and the Geometric Correction Box, the system also enables projection onto uneven surfaces – and with a light performance of up to 6,000 ANSI lumens. Thanks to the Correction Box, it is also possible to project from unusual angles, because the technology evens out horizontal distortions. The image is bright and brilliant, even on a projection area of 300 inches – i.e. more than 7.5 metres. This means that bible passages, songs words or song numbers from the hymn book as well as personal pictures and videos can be easily seen everywhere, even from the back row. The mercury-free and therefore environmentally friendly laser and LED hybrid light source from CASIO enables an extraordinarily long life time of up to 20,000 hours, which previously would have required up to nine conventional mercury lamps. This means, for example, that there is no need for the laborious task of exchanging lamps on high church

ceilings. The Dual Projection System is also characterised by its low energy consumption of 390 watts. As a comparison: It consumes an average of 30 per cent less energy than regular projectors with over 5,000 ANSI lumens.

CASIO's Green Slim projectors are superb for mobile use in the course of everyday church business – whether for church council meetings, confirmation classes or presentations in different church rooms. With a light performance of up to 3,000 ANSI lumens, this produces brilliant projection results in both conference rooms and smaller rooms. Even when it comes to presentations for the youth group or choir while being away, the projectors are very useful companions due to the handy A4 format, and they impress with relevant product features: thanks to the Quick Start & Stop function, the projector doesn't need to cool down after use – it can be unplugged immediately without the light source getting damaged. It is also possible to give presentations without a PC by using a smartphone or USB stick. The 2x optical zoom reinforces their flexibility; the projector can stand at varying distances away from the projection area.
