

PRESS RELEASE

A new label printer as a diligent helping hand in the field of medicine

Maintain a clear overview within medical facilities: CASIO has made some useful additions to its range of labelling systems in the form of the KL-HD1 mobile device and the KL-G2 with PC connection.

Norderstedt, 15th April 2015. Whether they are used for laboratory samples or medication, labels are an everyday essential for clinical applications. Thanks to these new devices from CASIO, any item can be labelled quickly and easily by hand. The labels/sticky notes produced with the Labemo devices are ideally suited for temporary labelling because they can be easily removed without leaving any residue. The labels produced with the Label Printer are ideal when the labels need to remain in place for a long time.

Safely label samples

The labelling systems prevent mistakes and inconsistencies with laboratory samples by quickly printing out the patient's name, ward, date and time, and any noteworthy facts — all essential information is reliably affixed to the sample.

Medication labelling promotes transparency

A clear overview of medication is essential for staff and patients alike. You can tidy up the medication cabinet with labels such as "Pain relief" and "Sedatives". Essential information such as "Opened on ..." and "Not suitable for haemophiliacs" can be affixed directly to containers of medication for clarity at a glance.

Two new label printers — For long-lasting satisfaction

The compact, handy KL-HD1 Label Printer with battery operation is ideal for mobile use. The intuitive, easy input concept, large display screen and modern design of the KL-HD1 makes this device a useful tool.

With the KL-G2 Label Printer, CASIO is launching a clever device for stationary use. This label printer is very user-friendly and can be easily connected to a PC via USB, meaning the device is compatible with all of the fonts and languages installed on the computer. Even barcodes can be printed. Thanks to the very high printing speed, the labels are created immediately and the automatic cutter with half-cut function makes it especially easy to detach the labels from the backing paper.
